

Centrica KPS Ltd Killingholme Power Station

Client Brief

To carry out a full inspection of all the fixed access ladders, platforms and gantries at Killingholme Power Station.

The equipment falls under the Provision and Use of Work Equipment Regulations (PUWER) 1998 and as such requires a regular testing and inspection regime.

Our Solution

Arco Professional Safety Services Ltd provided an IRATA qualified inspection team, to carry out a full measured and detailed examination of approximately 200 fixed access systems situated at Killingholme Power station.

A full report was produced detailing the assets and any recommendations.

Benefit of our Solution

Our inspection team could get within touching distance of the access equipment and using rope access and confined space techniques completed the project safely and efficiently.
